

VPS Connection to the NMR Reservation System

Instructions for obtaining virtual private network (VPN) software (Cisco AnyConnect) and for setting up a VPS connection are available by following the link provided below:

https://uofu.service-now.com/cf/kb_view.do?sysparm_article=KB0000538

The AnyConnect VPN software is available in versions that run on Windows, macOS, and unix operating systems.

To create a VPN connection run AnyConnect. A panel like the one shown below will appear:

In the top section, labeled VPN with the lock icon, type:

vpnaccess.utah.edu

Select Connect.

Complete the VPN login section, providing your UNID, as uXXXXXXX, your University of Utah password, and a 2FA passcode.

After you successfully make a VPN connection, you can create a reservation, access your saved files, or process NMR data. See additional online help modules for more information.
