

# Instructions for Obtaining and Configuring XQuartz Software

To connect to the NMRC server using MAC OS, you will need to install the **XQuartz** software package.

The **XQuartz** X-window package is available at the following link:

<https://www.xquartz.org/>

Download and install the **XQuartz** .dmg file. The current version of **XQuartz** is:

**XQuartz-2.7.11.dmg**

It will most probably be useful to add a short for **XQuartz** to the **dock** – find the application in the applications directory and drag it to the **dock**.
